

Earth Day 2017

Public Lighting work over the last few
years

Why, how and wherefore

- Public lighting is the most used icon for energy use and waste. Everyone is aware of the images of earth by night...

Reduce, reuse, recycle

- By changing the lamps and lanterns from low colour rendering and high energy using Sodium to LED, we can reduce our energy, reuse our assets and recycle our budget into making our environment better

Kill Lane 2013

Sodium Light

Kill Lane 2017

LED Light Decreases Light Pollution

Kill Lane: 5.5kW saved here alone = €2,622 energy per year

More to do...

- DLRCoCo saved over 1.1MWh of energy in Public Street Lighting alone last year and plan to keep saving energy while making the roads safer for the foreseeable future.
